

## VERSICO ZINC NAIL-IN ANCHORS

### GENERAL:

Zinc Nail-In Anchors are designed for use with Versico's Termination Bar or Seam Fastening Plates to attach membrane to concrete block, brick or structural concrete walls. A zinc plated nail pin is used to provide excellent corrosion resistance while the zinc alloy body provides excellent holding power.

### TYPICAL PROPERTIES AND CHARACTERISTICS:

Size	Weight/Ctn.	Packaging Fasteners/Ctn.
1-1/4" x 1/4"	19 lbs.	1000

- Zinc alloy body.
- Stainless steel drive pin.
- Round mushroom shape head.

### CAUTIONS AND WARNINGS:

- Eye protection is recommended during drilling and installation.

### INSTALLATION:

- Drill a pilot hole with a standard 1/4" diameter masonry drill bit. (The pilot hole must be pre-drilled to a sufficient dept to prevent contact between the fastener tip and any accumulate dust in the pre-drilled hole.
- Insert Nail-In anchor and tap gently until anchor body head is set tightly against the termination bar or seam plate.
- Hammer the zinc plated nail flush with the head to expand the anchor body.
