

VERSICO METAL FLAT SHEET PROGRAM

Versico is making it easier than ever for edge metal to be covered under the Edge-to-Edge Total Roof System Warranty. Contractors can now use Versico metal flat sheets to shop-fabricate coping and fascia for inclusion in Edge-to-Edge Warranties (up to 20 years with up to 80 mph peak wind speed coverage). This provides contractors with the flexibility to fabricate their own edge metal while still delivering superior warranty coverage backed by Versico.

Versico's Metal Flat Sheet Offering

- Versico offers a wide range of metal flat sheets in both steel and aluminum. Kynar-coated flat sheets are available in 22- and 24-gauge galvalume steel and .032", .040", .050", and .063" aluminum.
- Versico steel and aluminum flat sheets are available in over 30 Kynar colors.
- Contractors can use Versico flat sheets to fabricate coping and fascia covered by the Edge-to-Edge Total Roof System Warranty (up to 20 years, peak wind gusts up to 80 mph).

The Edge-to-Edge Total Roof System Warranty

- The roof edge is the first line of defense against wind damage on any single-ply roof, and Versico's Edge-to-Edge Warranty ensures that coping and fascia are covered as part of the roof system warranty. This provides security and peace of mind to the building owner and contractor for years to come.
- Shop-fabricating edge metal is easy with Versico metal flat sheets. Edge metal must comply with Versico specifications and details (refer to Spec Supplement - Metal Edging G-10-18).
- Versico's VersiTrim™ prefabricated edge metal products are also covered under the Edge-to-Edge Warranty and can be used on projects with warranties up to 30 years, or when ES-1 testing and FM approval are required.
