

ROXUL Partnership

January 13, 2014

To: Versico Independent Sales Representatives, Approved Contractors and Distributors

Versico is pleased to announce a strategic partnership with ROXUL[®] Inc., North America's largest manufacturer of stone wool insulation products. This collaboration of two industry leaders will offer designers and building owners access to new and innovative roofing systems.

MONOBOARD[®] insulating coverboard and TOPROCK[®] DD insulation, now available for purchase through Versico, will be included in Versico's roofing warranty programs for EPDM, TPO and PVC systems. Versico will also have access to the bitumen-coated MONOBOARD Plus and TOPROCK DD Plus products that provide an ideal substrate for Versico's Hot-Mopped system, which incorporates VersiFleece[®] AC membranes. Systems using ROXUL products will include an option for a thermal warranty, which provides the assurance that the insulation's R-value will not decrease for the duration of the system warranty.

Versico and ROXUL have also partnered to create the Acoustic 41[™] assembly. This roofing system is designed to reduce noise entering or leaving a building. It has been tested to ASTM E90 and provides a Sound Transmission Class (STC) of 41, making it ideal for buildings in which sound attenuation is a concern. This assembly can also contribute toward LEED[®] credits for Sound Attenuation in Schools (New School Construction).

- Pricing for ROXUL insulation must be quoted. Please contact your Versico Pricing Analyst for a quote.
- A full truckload of ROXUL material contains 52 4'x4' pallets, or between 33,000-35,000 board feet.
- ROXUL products currently ship from Milton, Ontario, Canada.

If you have any questions about the specification, uses or application of ROXUL products, please contact Versico.

Sincerely,

Michael J. DuCharme
Director, Product Marketing
