

VersiWeld® TPO Rib Profile
April 16, 2015

To: Versico's Approved Contractors

Versico Roofing Systems is pleased to introduce its new VersiWeld® TPO Rib Profile. This innovative product combines the advantages of a single-ply system with the aesthetic appeal of a standing-seam metal roof. To achieve this look, Versico's TPO Rib Profile is hot-air welded in a parallel pattern to the exposed surface of VersiFleece® TPO membrane.

Designed to cast a distinctive shadow that can be seen from the ground or surrounding areas, Versico's TPO Rib Profile provides enhanced aesthetics when compared to other TPO rib profiles. This product is extruded from the same weather-resistant TPO compound as Versico's VersiWeld TPO roofing membrane, ensuring comparable weathering characteristics and an excellent color match.

Versico's durable TPO Rib Profile is dimensionally stabilized and strengthened by a 1/8" fiberglass reinforcing cord that runs the length of each section. During installation, the Rib Profile sections are joined together by a non-corroding, fiberglass pin, ensuring compatibility and continuity throughout the application.

Versico's TPO Rib Profile is available in white, gray and tan and measures 10' long, 1 1/4" tall, and 2 1/16" wide (including the welding flanges). The vertical profile is a substantial 3/8" thick, and each section of TPO Rib Profile has a 1/8" alignment hole. This product is packaged 20 pieces per carton; each carton includes 25 connecting pins.

Product Description	Packaging	Part Number
RIB PROFILE - WHITE	20 Lengths/CTN	324574
RIB PROFILE - GRAY	20 Lengths/CTN	324572
RIB PROFILE - TAN	20 Lengths/CTN	324573
